Abstract:

Abstract Smart flame monitoring systems are new soft sensors using IoT that sends the flame temperature, combustion quality, flue gas emissions by flame image analysis cloud technology. Smart flame monitoring system and implementation of soft sensors into the tfloud space by which, this novel flame monitoring system will bring about reduction in air pollution contributed by the flue gas emissions from power plants and will also offer a feed forward control action by which waste of fuel and air pollution minimized. Awareness can be created in the global warming to the people.

Abstract:

ABSTRACT The present invention relates to a compound of Formula (2-aminopyrimidine fused 7-azaindazole derivatives), useful as remedies or preventives for treating myeloproliferative disorders, autoimmune diseases, inflammatory diseases, cancer, etc. The pharmaceutical composition of the invention and the compound of the invention have an excellent anticancer activity against different human cancer cell lines like (MCF-7, A549 & MDA MB-231) thereof, and are therefore useful as remedies and preventives for myeloproliferative disorders, autoimmune diseases, inflammatory diseases, cardiovascular disease, essential thrombocytosis, viral diseases, infectious diseases, especially cancer.

Complete Specification

DESC: COMPLETE SPECIFICATION

TITLE OF THE INVENTION

2-AMINOPYRIMIDINE FUSED 7-AZAINDAZOLE DERIVATIVES AS ANTICANCER AGENTS

FIELD OF INVENTION

The present invention relates to substituted 2-aminopyrimidine fused 7-azaindazole compounds and pharmaceutical compositions thereof. In specification, substituted 2-aminopyrimidine fused 7-azaindazole novel compounds with biological activity and compositions thereof are described, which are useful for the treatment of myeloproliferative disorders, autoimmune diseases, inflammatory diseases, cardiovascular disease, essential thrombocytosis, viral diseases, infectious diseases, especially for cancer.

Abstract:

India lives in it villages. Villages are now urbanises by Smart city Mission of Indian government. Mission proposes to provide core infrastructure and responsive governance citizen by connecting internet to physical devices like streetlight, municipal infrastructure, parking meters, etc. Transportation, the keystone of urbanisation need to be resurged in terms of traffic i congestion, automated driverless public transport all-around the clock and smart parking system. The proposed smart parking system includes IoT module to monitor and signalize available parking spaces. Mobile application could enable the driver to locate available parking space and book the space then pay for parking through wallet. This system would avoid traffic congestion on arterial roads by unauthorized parking and regulate parking fee collection for better municipal service.

Abstract:

A SYSTEM OF ORIENTED MEDICAL INSURANCE PREDICTION WITH MACHINE LEARNING INTEGRATED IOT This invention relates to an Oriented Medical Insurance Prediction with Machine Learning Integrated IoT. Health insurance significantly provides policies and coverage for a variety of purposes like surgery, ambulatory, heavy illness, persor accidents, transplants, and so on. Nowadays, Governments and other private companies have been announcing flexible benefit programs to people who are affected by a kind of diseases. However, automatically predicting the amount of payment allotted to a particular person affected with a disease is still a challenging point. Hence, this patent plans to develop an effective machine learning system integrated with the Internet of Things (IoT) to predict the health insurance amount. IoT in healthcare enables interoperability, machine-to-machine communication, information exchange, and data movement that make healthcare service delivery effective. The model includes three phases (a) Feature Extraction, and (b) Weighted Feature Extraction, and (c) Prediction. The feature extraction process computes two statistical measures: First Order Statistic mean, median, standard deviation, maximum value of entire data, and minimum value of entire data, and Second Order Statistics like Kurtosis, skewness, correlation, and entropy. The prediction process deploys a renowned machine learning algorithm called Neural Network (NN). As a main contribution, weighted feature vector is developed where the weight is optimally tuned by Modified Whale Optimization Algorithm (WOA). In addition, the contribution also relies on NN, where the training algorithm is replaced with the same modified WOA for the purpose of weight update. The modified WOA developed here is termed as Fitness dependent Randomized Whale Optimization Algorithm (FR-WOA). At last, the valuable experimental analysis using three datasets confirms the efficient performance of the suggested model.
